

Molift Quick Raiser 205

Ergonomic sit-to-stand hoist with
outstanding transfer capability

 **etac**[®]

Molift Quick Raiser 205

The Molift Quick Raiser 205 is a state of the art sit-to-stand hoist with outstanding transfer capabilities and exceptional maneuverability. The design encourages a natural movement pattern and fulfils the lifting needs of users with some weight-bearing capacity.

The natural movement pattern

The inclined column encourages a natural movement pattern and fulfils the lifting needs of users up to 205 kg, with some weight-bearing capacity. The user can feel safe and comfortable in every movement as the lifting experience is the same regardless of carer, lifting arm or sling.

Exceptional maneuverability

The Quick Raiser 205 is compact, stable and exceptionally easy to manoeuvre. The hoist has a small turning radius and good manoeuvrability even in tight spaces, thanks to the unique wheel position, angled push rod and outstanding weight distribution of the base.

The hoist fits under most beds and chairs, and the variant with electrically adjustable legs allows accessibility almost anywhere. The fixed leg option enables a very small footprint.

Flexible lifting arm

To facilitate the carer's work and not worry stressed users, the lifting arm can be folded away from the user towards the column when not in use.

Excellent accessibility

Quick Raiser 205 fits under most beds and chairs, and the electrically adjustable legs enable accessibility almost everywhere.

Easily manoeuvred

Easy to manoeuvre even in tight spaces thanks to the base's small turning radius and weight distribution.

Ergonomic for the carer

The adjustable legs can remain closed, regardless of movement, giving the carer room to work with minimized risk of injury.

Ergonomic transfers with a natural movement pattern

Consistent & safe lifting

The lifting trajectory follows a natural movement pattern, due to the design of the inclined column.

Thanks to this natural movement pattern, the sling stays in place and does not slide up, which is a usual problem with sit-to-stand hoists. The lifting path is always the same regardless of the sling and who the carer is. This results in a safe, comfortable and consistent lifting experience for the user.
